Provided practical instruction in GIS and remote sensing applications for forestry students. Key responsibilities included:

Teaching georeferencing, attribute table editing, and spatial queries

DEM analysis: slope, contour, and hillshade generation

Map layout design and cartographic styling

Rainfall data interpolation and spatial trend analysis

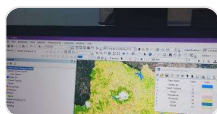

Land cover classification and NDVI-based vegetation analysis, Land Surface temperature

Image preprocessing: radiometric and geometric correction of satellite imagery

Integrating remote sensing outputs with GIS for spatial decision-making

Multi-criteria analysis and scoring for disaster risk mapping

Lab sessions were conducted using ArcMap 10.8 , Tuesday to Friday (1–5 PM), focusing on real-world forestry and environmental challenges.
